APC Propellers

Subject: APC Propeller Life Expectancy
Revision: Rev 1
Date: June 1, 2021

APC propellers are designed for infinite life under normal operating conditions.

The actual propeller life will depend on the operating environment. If operated under the maximum recommended RPM limit, APC propellers should not experience fatigue stress that will lead to structural failure.

Prolonged exposure to sunlight will eventually degrade the material. Care should be taken to protect the propeller from prolonged exposure to the sun.
